

# PRODUCTION CARPENTER

“ At AMEL, we don’t build boats: we build the customer’s boat. ”

It takes a lot of experience and **mastery of your craft to be a carpenter at AMEL**. Building the furniture is an important step in the construction of AMEL boats. Using high quality wood (oak or walnut, solid, veneered, shaped or in panels), **the carpenter starts working on the boat’s primary structures** before producing the magnificent features (kitchen, beds, wardrobes, etc.) that will enhance the boat’s interior.

**The carpenter has to face maritime constraints** like damp, heat and cold, which is why he follows highly specific manufacturing methods. **Quality learning for a quality result**. Because a vessel is a moving thing that will have to stand up to waves and wind, **the carpenter’s role is to do everything possible to provide the necessary comfort**.

## MISSION STATEMENT

- Matching and marking wood panels
- Gluing vacuum-formed panels
- Drawing plans
- Cutting solid wood or plywood
- Manufacturing parts and assembling components
- Finishing (edgebanding/sanding), fitting (hardware assembly, sanding and joint treatment)

## DOMINIQUE DUGUÉ PRODUCTION CARPENTER

“ What’s really great about the AMEL shipyard is that we don’t build boats: we build the *customer’s* boat. This is a strength as well as a pleasure for us carpenters, because each unit is different from the previous one. Trees are like humans, all of them are unique. So when we make a boat, it will inevitably be different, and that’s fantastic for us! ”
