

# PLUMBER

“The desire to build the finest boats is what best qualifies the AMEL shipyard.”

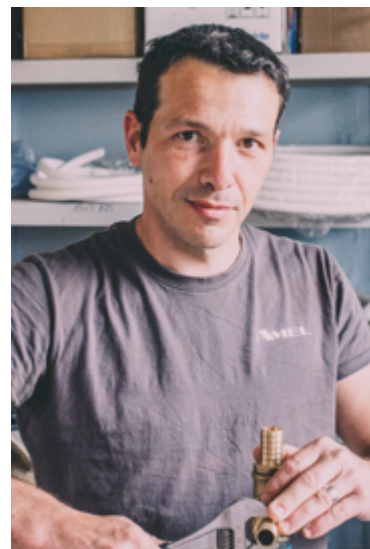

Becoming a plumber at AMEL means, first and foremost, showing consistency in your work. **Completing tasks at each stage of the boat's creation, the plumber manufactures and prepares parts, adds finishing touches and also commissions his systems.** He is responsible for many onboard systems: air conditioning, water drainage, gas and heating. The plumber will implement all these components and assemble them **into functioning systems that are identical to all the boats.**

## ARNAUD AVELINE

PLUMBER

“If I had to describe AMEL in a single sentence, it would be the pleasure of a job well done.”

### MISSION STATEMENT

- Preparing equipment on the workbench (flexible and rigid plastic and copper pipes, black water tanks, valves, and more.)
- Onboard: drilling (bulkheads, hull, deck), through-pipes, installing equipment for kitchens / bathrooms / sanitary facilities, connecting water systems and tanks, waterproofing.
- Pressurisation tests followed by commissioning and inspection
- Can take part in deck fitting work, maintenance, hydraulics, various assembly jobs, welding and lamination work if production requires it.
